

The company's environmental policy is based on the consideration that a management that aims to maintain the natural balance of all environmental aspects, contributing to improving the quality of life, and aims to prevent any type of pollution, constitutes for the company, a precise civil commitment as well as an element of stability and efficiency.

Optimizing environmental impact means institutionalizing, documenting and disseminating knowledge of the rules adopted as an organizational and operational reference standard, in relation to all environmental aspects, as well as making available the resources necessary for the implementation of this policy, according to an organic planning.

In the process of implementation of its environmental management system, the company has chosen the standard UNI EN ISO 14001: 2015, as universally recognized, and widely applied, ensures the validity of standards, and makes it easy to relate to situations external to the company, facilitating comparisons in terms of choices and results.

The implementation of the environmental management system involves:

- define an organizational structure through which the operating procedures are defined and tasks and responsibilities are established;
- adapt the system to the evolution of environmental and technical aspects;
- monitoring all processes, identifying and recording every problem and managing deviations from the objectives defined through appropriate corrective actions, to check their implementation and effectiveness;
- promote the preventive actions necessary to anticipate the occurrence of deviations from the objectives related to environmental performance;
- maintain an adequate level of staff training and training, constantly involve them in considering that the problems of environmental impact are problems for everyone, and therefore require, for their solution, the participation of each employee.
- involve its supplier base, with which to promote and implement mutually beneficial processes and procedures, in line with criteria for improving the environmental context;
- maintain the necessary level of communication with the outside world, which allows stakeholders to have data on the company's environmental impact;
- carry out an initial analysis, to acquire the knowledge of the state of the art of the situation, on the basis of which to set the system and the relative objectives;
- refer to indicators related to significant environmental aspects; in relation to these, set specific objectives and plan the times, responsibilities, resources and operational paths that allow them to be reached; evaluate, at the end of the established deadlines, the level of implementation of what is planned;
- comply scrupulously with the provisions of current environmental legislation.
